Hurley Marine
INNOVATIVE MARINE PRODUCTS

Hurley H₂O Davits™ are a rugged davit system that lets you lift and pull your soft or hard bottom dinghy on for easy storage or just push off for launching. Easily mounted on the swim platform and can be installed, in most cases, while the vessel is in the water. With the Sleek Euro Design, Marine Grade High Density Polyethylene Cradles and Stainless Steel Components the

Hurley H₂O functions as good as it looks and is impervious to harsh environments. Our revolutionary new stainless steel mounting system provides a quick release, leaving a very small profile that could pull a barge. Each mount footprint requires only two bolts for the install and only stands 5/8" high leaving a clear deck for any activity.

- Multiple Position Adjusting Chock System
- Can Be Used for Soft or Rigid Tenders
 - Independent Cradles with Rollers
- Accommodates Different Size Platforms
